# WALL MOUNTED

## Wall Mounted Green Facade Trellis Panel

The **greenscreen**® trellis system can transform blank concrete or masonry walls into soft-textured, vine covered, seasonally varying surfaces commonly referred to as "green facade walls." The elements are simple and the possibilities are endless for mounting modular or shaped panels near entries, around windows and in interior courtyards as a living plant matrix that covers all or part of a building facade... the examples are many!

Our system of engineered mounting accessories is designed to hold **greenscreen**® trellis panels off the building surface, protecting the building's waterproof membrane from direct plant attachment and transferring the weight of the plants to the screen structure and the wall. Integrate wall mounted **greenscreen**® elements into new construction or retrofit to existing buildings with adjustable clips that adapt to uneven surfaces. Panels can be stacked side to side or top to bottom to cover larger areas.
